

Python Programming & SQL Module Assignment

Python Programming & SQL - 3 Questions In Total

Project 1 : Creating Databases and Operations

Create a table containing assignment scores of 6 students in class for Python and Javascript and write a query that calculates the total score of all assignments for each student and recognizes the topper student from the table using the scores.

Project 2 : Handling Databases and CRUD operations using Python

Create a table in the employee database and insert the employee related data of 6 employees to the employee table. Get all the employee related data and update an employee record into the table. Delete the last employee record of the table.

Project 3 : Voice Assistant using Python

Create a Voice Assistant Project in Python with 4 use-cases that solves your daily life problems.

(Hint : Opening WebLinks, Taking a Screenshot, Reminder, Weather etc.)
